

## PicStar board 18F4550 – USB

PicStar is a compact board suitable for many different kinds of applications.

It can be programmed in various languages directly via the USB port and does not need a Pic programmer.

The ports are assigned to connectors in order to fit standard needs, but port D is free in order to help you develop and debug your own applications.

Documentation and software: <http://www.z-control.ch> - click on PICSTAR DOC

The complete kit, with all SMD components already soldered costs CHF 99.-

Picstar is developed by
