

Rhodo, a speedy fun robot

The Rhodo available now on the Swiss market only is powered by a Lipo rechargeable accu. maintained by magnets (Bahoma system). The new Rhodo-Luxe with built-in Lipo and charger will be available end of March 2010.

At power on, the Rhodo mouse starts a demo which shows its art and speed.
If the IR transmitter is on, one can pilot the robot over a distance of about 5 meters, but not outside if the light is bright.

The accus of the Rhodo are used in many others toys manufactured by Didel and Plantraco.
The Lipos must never be completely discharged. Pay attention not to forget the Rhodo with its switch ON.

<http://www.youtube.com/watch?v=48yKZneEyoA>

The controller can be reprogrammed with a Pickit2 and the Pk2 adapter.
It is amazing and easy to change the sequences of the demo. Simple orders are used to code the moves, one has nothing to know about the Pic 16F630 to create his own ballet.
